

LEAPERS[®]

2025 PRODUCT CATALOG

THE LEAPERS PHILOSOPHY

**DELIBERATE INTEGRATED MANUFACTURING.
SOLUTIONS END-TO-END SINCE 1992.**

“From day one, I felt strongly as a small business: I have to know how I build my products. My operation depends on pushing these products out to distributors. But you always have this concern: Who is making this for you? How is this being made? And: how am I going to control what I want it to do?”

- David Ding, Founder and CEO of Leapers

Since the beginning Leapers has believed and invested in the long-term development of products to span generations. We knew vertical integration was the key to having full control over making great products. In 2009 we broke ground on our U.S. manufacturing facility UTG PRO® at headquarters in Michigan, just one year after the financial crisis. Today UTG PRO® operates over 30 world-class CNC machines from Mazak, Haas, and Brother, and built our own 100-yard indoor shooting range for on-demand testing.

Each year is a progression expanding our in-house capabilities. In 2024 we scaled production of our billet receivers at UTG PRO® in Livonia and came out with our new high-performance line of riflescopes, Integrix®, after 5 long years of development and optimization.

We believe in equity. From our affordable line of UTG® products to our uncompromising UTG PRO® products Made in USA designed for the discerning civilian. We made Integrix® for the professional marksman and are pushing the limits to take that DNA and apply it to our optics at all price levels.

Our mission is to be your solution provider. After dedicating decades to progressing our manufacturing, our current era is focused on integrating shooter feedback into every detail of product development: out of the office and on the ground.

INTEGRIX™

INTEGRATED CAPABILITIES

FROM CNC MACHINE TO SHOOTING RANGE: AN ENGINEER'S PLAYGROUND.

Leapers began its manufacturing journey over 30 years ago. Over the years as our expertise matured we made methodical, deliberate investments to own our product development lifecycle end-to-end. We are on the leading edge of automation with Mazak, installing and productionalizing two of their Pallettech multi-tasking solutions and expanding their collective capacity to 72 pallets a full decade before most manufacturers across any industry.

Today UTG PRO® U.S. Manufacturing runs an immaculate floor: 34 top of the line CNC machines, a majority Mazak alongside Brother, Haas, Miyano and Fanuc. Our UTG Europe Distribution Center in Germany allows us to serve customers worldwide, and our UTG Taiwan R&D Center keeps a pulse on the latest technology, standing amongst world-class semiconductor manufacturing companies outside Taipei. The sky is the limit in our facility: whether you are a shooter with a specific need or a company building a custom project.

Our 100-yard indoor shooting range at headquarters in Livonia, Michigan allows us to do live-fire testing as immediate feedback to prototypes machined at UTG PRO® next door.

Learn more about our manufacturing journey on our website.

HANDGUARD MACHINING

The UTG PRO® Monolithic Handguard for MP5 and MP5K hit the market 2024. We machine this handguard on a Mazak HCN4000 4-axis horizontal milling machine with a 24 minute cycle time. They are then cerakoted, inspected, and packaged by us. Just one example of our daily machining operation.

ROBOTIC POLYMER INJECTION

We run Japanese Fanuc Roboshot Electric Polymer Injection Machines with glass fiber-reinforced polymer to give proven and unbeatable durability to our magazines for AR, AK, and Glock®. By owning different types of manufacturing in-house, we are able to build for quality and a fair price ecosystem for dealers and end customers alike.

PRECISION QUALITY CONTROL

In 2023 we obtained our O7 license and began manufacturing billet AR receivers in Michigan. Pictured is a specialized precision Zeiss Coordinate Measuring Machine to check the receiver for complex irregular dimensions and guarantee concentricity. We do climate-controlled inspection with state-of-the-art equipment to ensure dimensions and tolerance requirements are met.

HIGH-PERFORMANCE OPTICS

In 2024 we entered production of our high-performance optics brand, INTEGRIX®, a key milestone after 5 years of investment in our capabilities. We use premium German and Japanese glass built to spec from our painstaking optical design. We machine, measure, assemble, and test in the lab and on the range from start to finish with meticulous precision to deliver a new level of optics.

BE CUSTOMER FIRST

DEVELOPMENT OUT OF THE OFFICE AND ON THE GROUND

Advancing exceptional products extends beyond the engineering; it centers on the shooter. After building up manufacturing proficiency over a breadth of products, our current era is focused on utilizing our capabilities to their fullest potential.

We are evolving product development to get our teams out of the office and training beside you, immersing ourselves in the shooter's experience using our products within real-world conditions. Some of us are hunters, competitors, or former military, but the best product feedback is not left to our own. The best solutions result from being on the ground, engaging with shooting communities directly, and refining shooter-driven details based on first-hand experience.

Our Engineering Manager Jay is excited to return to Lynx Brutality in 2025. We took Sylvia from Accounting to train with the Army Marksmanship Unit at Camp Perry. We had a blast learning from an advanced ELR course with the SAAM shooters at FTW Ranch, and we are doubling down on encouraging our people to borrow our products on their next hunt in Michigan.

Find us at the next competition, trade show, or on social media, and let us know where you see an opportunity to build something better. We want to hear from you.

GOING THROUGH THE RINGER

When Leapers got the opportunity to sponsor Lynx Brutality with Polenar Tactical, we knew there was no better way to engage with the European shooting community than to compete ourselves. Luckily Jay was already fit, and guys across multiple teams pitched in to train him. We ran drills before hours and during lunch, and gathered invaluable firsthand feedback on our product. Our INTEGRIX® LPVO and UTG® dot sight performed with flying colors, as did our Engineering Manager Jay.

CREATING A SHOOTING CULTURE

Nurturing our shooting culture is important. Sylvia's day job is Accounting and she won a Leapers AR at our year-end raffle. Here she shoots for the first time at Camp Perry. In July we took every single employee for a fun event on a range to get behind the gun, learn fundamentals, and shoot some steel.

ADVANCING OUR MARKSMANSHIP

Whatever our current experience and expertise, we will not be satisfied. Last August we enrolled ourselves in a custom Advanced ELR course from the Sportsman's All-Weather All-Terrain Marksmanship (SAAM) group at FTW Ranch, learning new formulas and shortcuts for wind and to better leverage our Kestrels.

HUNTING AND LOVE OF OUTDOORS

Leapers was born from tactical solutions, but we have accumulated a compelling set of products for hunters. Here we take the team and our new scopes out to Muller Hunting & Safari in South Africa, beholding the beautiful wild bush and knocking off our big game bucket list from Cape Eland to Oryx and Kudu, the Grey Ghost of Africa.
