

UNIVERSAL QUICK DETACH LEVER LOCK INSTALLATION GUIDE

US PAT.
8397421

Applicable to All QD Riser Mounts

CAUTION: Make sure firearm is not loaded. Remove magazine and examine chamber. Use safe handling procedures at all times.

1. Turn the Cam Lever to its unlocked position. Place the QD adaptor on the rail at a desired position.

2. Turn The Cam Lever half way toward the locking position. Use step 3 to complete proper adjustment.

3. Use the included Allen wrench to adjust the Hex Screw at the side of the cam for proper tension and fit against the rail. Adjust clockwise to increase the tension and reduce the clamping width. Adjust counter-clockwise to decrease the tension and increase the clamping width.

4. The optimal tension is achieved when the side plate first makes contact with the rail while the Cam Lever still has enough travel left for you to securely snap into its locking position. Once you achieve the optimal tension, push the Cam Lever all the way to the right for a positive lock onto the rail. You may repeat Step 3 and 4 if needed to find the best clamping tension and locking position for your QD adaptor on the rail.
